

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

7 Pounds, instead of 4, separated the Balls. Having found the right Weight afterwards, I made several Trials, but cou'd not again bring the Force of the Contact to be equal to 47 Pounds. How much greater than 47 Pounds the Force of the Contact was in the 5th Experiment, I cou'd not determine, by reason of the above-mention'd Accident; but the Surface was much as before. I shall make some more Experiments of this Kind, and if I can come to any Certainty in the Measure of the touching Surfaces, and utmost Force of the Cohesion; I will communicate the same, and repeat them before the Society.

VII. Extract of several Letters and Certificates sent to his Majesty the King of Great Britain, concerning a very particular Nævus Maternus, or Mole. Communicated by Dr. Steigertahl, Physician to his Majesty, F.R.S.

JEREMIAS Rudolph von Walthausen, a Captain of the Garrison at Danneberg, near Lunebourg, was born October 24, 1680, with a very singular Mole upon his right Arm, Shoulder, and Hind-part of his Side, not unlike the Branch of a Vine, with its Leaves and Grapes. It hath been affirm'd and attested both by the Deceas'd himself, and several of his Relations and Friends, that his Mother, when big with Child, had an earnest Desire for Grapes, and impatient to stay, till they were full ripe, went down into the Garden to pull off some of those unripe; whereupon it happen'd, that a whole Branch with its Leaves and Grapes suddenly fell down upon Ccc

her right Arm, which Accident much frighten'd her. Some Time after the was brought to Bed, and the Child was observ'd to have several reddish or bluish Spots. beginning from behind his Shoulder, and from thence running over the same, down the right Arm to the Fingers. The Captain's whole right Side was bigger than the Left by an Inch and upwards, and fo continu'd to his Death. The Veins of the right Arm were much rais'd, lying almost immediately under the Cuticula, which made them very conspicuous. they were, besides, very much distended, chiefly between the Elbow and Hand, where they were almost as big as a Man's Thumb. On the Infide of the fore Finger the Vein was extended into a small Tumour, of a reddish, or purple blue Colour, about the bigness of a Nutmeg, corrugated with some lenticular Protuberances, which made it in some measure resemble a Grape. The like Tumours, but not so big, were observ'd in several other Parts of the Arm, in the Spring Time; and as they thought, when the Sap began to enter the Vines, as also when the Vines flower'd, and in Autumn, when the Wine was fermenting, the Captain was taken ill with violent and itching Pains in the affected Arm for some Days. The whole right Side then fwell'd more than usual. and the Veins and Tumours above-mention'd were fo distended with Blood, that at last, a serous Matter was forc'd out of the Pores of the faid Tumours. which as it gave the Patient some Relief, so he promoted it, by scraping the Tumours with the Edge of a Penknife. If the Captain held up his affected Arm, the Running of the Blood backwards in the distended Veins was very visible. If he held his Arm down again, the Blood return'd with some Noise, and senfibly fill'd up again the Vessels, which by the preceding

ceding Action had been emptied. For this Reason, the Captain, when he was a Bed, was oblig'd to lay his Arm upwards. In February last, the Captain was again taken ill with violent Pains, and a strong senfible Pushing of the Blood into the affected Arm; for both which, they being not only more violent, but continuing longer than usual, he was advis'd to be let Blood on his left Arm; as this did not immediately relieve him, they applied at his Desire externally Epithemata of Plants boil'd in Wine; this eas'd his Pains, and made him fomewhat more quiet, fo that he could walk about the House, but he nevertheless continu'd reftless for some Days, and was, on Saturday the 17th of February, S. N. early in the Morning, feiz'd with a violent Oppression of his Breast, which in a few Minutes made an End of his Life. The Surgeon. then present, did not bleed him, but gave him only fome Spoonfuls of a strong Cordial Mixture, which he just happen'd to have about him, and of which the Patient, with much Difficulty, could swallow but small Part. He was, when he died, 44 Years, 3 Months, and 24 Days old; he was otherways a strong robust Man, much given to Fatigue, and discharg'd with great Bravery all the Duties of a good Soldier, as appear'd by his Conduct throughout the last War.
